

Standards Announcement

Project 2007-06 System Protection Coordination PRC-027-1

Comment Period Closed

PRC-027-1 – Protection System Coordination for Performance During Faults had initially been posted for a 45-day formal comment period on September 18, 2013 with a ballot scheduled for the last ten days of the comment period.

After NERC staff review and discussion with the chairs of Project 2007-06 System Protection Coordination and Project 2010-01 Training, it was determined that the disposition of PRC-001-2 Requirement R1 was outside the scope of the SAR of either project. Therefore, NERC staff has decided to initiate informal development on a new draft SAR that will take a holistic approach to training by combining various training requirements located throughout the set of NERC Reliability Standards (including PRC-001-2 Requirement R1) into a new PER standard. The posting of PRC-027-1 will be removed from comment and ballot and the associated documents will be modified to reflect this direction. The System Protection Coordination Standard Drafting Team expects to repost the documents next week for a 45-day comment period with a ballot period open the last ten days of the posting.

Background information for this project can be found on the [project page](#).

Standards Development Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.
