J. Calderon initiated the meeting, called roll, and reviewed the NERC Antitrust Guidelines and Participant Policy.

The team continued to review comments provided during the initial draft comment period. The team made several revisions in response to comments to clarify the attachments and figure numbers. There were many comments who identified that there was some inconsistency in usage of the operating region terms. As a result of this, the team removed the definitions and clarified the regions of these operation regions within the no-trip zone. R1 also now only references the no-trip zone as that defines the overall boundary for IBR to stay electrically connected and continue to exchange current.

Further on this, the team has added some language to clarify what is meant by "exchange current". A footnote was added to be sure that BESS that were fully charged or other IBR that may be in some form of absorbing current (active or reactive) were not considered as not "continuing to exchange current". What was meant here was to ensure that IBR were continuing to support voltage and not enter momentary cessation.
