

December 17, 2020

Kun Zhu & Bill Quaintance (on behalf of the SPIDERWG)
MISO Energy
720 City Center Drive
Carmel, IN 46032-3826
kzhu@misoenergy.org

Dear Sirs:

Thank you for submitting a Standard Authorization Request (SAR) dated December 30, 2019 for revising MOD-032-1 Data for Power System Modeling and Analysis.

Pursuant to Section 4.1 of the NERC Standard Processes Manual (SPM), Appendix 3A to the NERC Rules of Procedure, I am writing to inform you that on December 9, the Standards Committee (SC) reviewed and rejected the SAR submitted by the NERC System Planning Impacts of Distributed Energy Resources Working Group (SPIDERWG) for good cause. The SAR was rejected on the grounds that based on the comments received during posting, there is insufficient stakeholder support for this project and continued revisions of the SAR would not be productive.

For additional information on this matter, please see the attached background document, including a link to the comments received in response to a public posting, and the SAR. These documents were considered at the December 9, 2020 SC meeting.

Sincerely,

Amy Casuscelli
Chair, NERC Standards Committee

Cc:

Greg Ford, Chair and David Zwergel, Vice Chair, Reliability and Security Technical Committee
Joshua Pierce, Chair, Project 2020-01 Modifications to MOD-032-1
Amanda Schiro, Vice Chair, Project 2020-01 Modifications to MOD-032-1

Enclosures:

Standards Committee Background Document(s)

MOD-032 SAR

Project 2020-01 Modifications to MOD-032-1

Action

- Accept the Project 2020-01 Modifications to MOD-032-1 Standard Authorization Request (SAR) as submitted;
- Authorize drafting revisions to the MOD-032-1 Standard; and
- Appoint the Project 2020-01 Modifications to MOD-032-1 SAR Drafting Team (DT) as the Project 2020-01 Standard Drafting Team (SDT).

Background

On December 30, 2019, the NERC System Planning Impacts of Distributed Energy Resources Working Group (SPIDERWG) submitted the SAR to revise the current MOD-032-1 Standard language. The SAR proposes to revise MOD-032-1 to address gaps in data collection for the purposes of modeling and interconnection-wide case creation regarding distributed energy resources (DER). The goal is to provide clarity and consistency for data collection across Planning Coordinators and Transmission Planners when coordinating with the Distribution Provider to gather aggregate demand and DER data.

In March 2020, the Standards Committee accepted the SAR, authorized posting for a 30-day informal comment period beginning March 24, 2020 and authorized for solicitation of SAR drafting team members. The Standards Committee appointed the SAR drafting team on June 17, 2020.

The SAR DT met virtually between July 8, 2020, and October 28, 2020, to review and revise the SAR. The team considered the informal industry comments during this process and created eight themes to address industry comments. Industry comments, themes, and response to comments are posted at [Project 2020-01 project website](#).

Standard Authorization Request (SAR)

Complete and submit this form, with attachment(s) to the [NERC Help Desk](#). Upon entering the Captcha, please type in your contact information, and attach the SAR to your ticket. Once submitted, you will receive a confirmation number which you can use to track your request.

The North American Electric Reliability Corporation (NERC) welcomes suggestions to improve the reliability of the bulk power system through improved Reliability Standards.

Requested information			
SAR Title:	MOD-032-1 Data for Power System Modeling and Analysis		
Date Submitted:	12/30/2019		
SAR Requester

<input checked="" type="checkbox"/> Emerging Risk (Reliability Issues Steering Committee) Identified	<input type="checkbox"/> Enhanced Periodic Review Initiated		
<input type="checkbox"/> Reliability Standard Development Plan	<input checked="" type="checkbox"/> Industry Stakeholder Identified		
Industry Need (What Bulk Electric System (BES) reliability benefit does the proposed project provide?):			
As the penetration of distributed energy resources (DER) continues to increase across the North American bulk power system (BPS), it is necessary to account for DER in the planning, operation, and design of the BPS. The NERC System Planning Impacts of Distributed Energy Resources Working Group (SPIDERWG) has identified the need for improved modeling of aggregate DER for planning studies (including both utility-scale and retail-scale DER). MOD-032-1 addresses the gathering of modeling data to build interconnection-wide base cases for the planning horizon but the standard currently has no specific reference to DER data. This SAR proposes to update MOD-032-1 to: (1) include “data			

Requested information
<p>requirements and reporting procedures”¹ for DER that are necessary to support the development of accurate interconnection-wide models, (2) replace Load-Serving Entity (LSE) with Distribution Provider (DP) because of the removal of LSEs from the NERC registry criteria, (3) enable the SDT to review any additional gaps in DER data collection with the de-registration of LSE.</p>
<p>Purpose or Goal (How does this proposed project provide the reliability-related benefit described above?):</p> <p>This SAR proposes to revise MOD-032-1 to address gaps in data collection for the purposes of modeling and interconnection-wide case creation regarding DER. The goal is to provide clarity and consistency for data collection across Planning Coordinators (PCs) and Transmission Planners (TPs) when coordinating with the DP to gather aggregate load and DER data.</p>
<p>Project Scope (Define the parameters of the proposed project):</p> <p>The proposed scope of this project is as follows:</p> <ol style="list-style-type: none"> a. The table in Attachment 1 should be updated to include DER in the steady-state and dynamics columns. Details of the changes to be considered by the Standard Drafting Team are included in the “Detailed Description” below. b. Based on item a.) and the detailed description below, the SDT should consider whether including a definition for “Distributed Energy Resource (DER)” in the NERC Glossary of Terms is necessary. c. In alignment with the SAR submitted by the previous NERC Essential Reliability Services Working Group (ERSWG), LSE should be removed and replaced by DP as the applicable entity in Section 4.1.3 and all instances in the standard requirements and attachments. d. The SDT should review any potential gaps regarding data collection for aggregate DER data with the de-registration of LSE.
<p>Detailed Description (Describe the proposed deliverable(s) with sufficient detail for a drafting team to execute the project. If you propose a new or substantially revised Reliability Standard or definition, provide: (1) a technical justification² which includes a discussion of the reliability-related benefits of developing a new or revised Reliability Standard or definition, and (2) a technical foundation document (e.g., research paper) to guide development of the Standard or definition):</p> <p>This SAR proposes to address the issues identified in the project scope above. Specifically, the following details should be considered and addressed by the drafting team:</p> <ul style="list-style-type: none"> • In the Applicability section of MOD-032-1, LSE should be replaced with DP, in alignment with the SAR previously submitted by ERSWG. Similarly, all relevant uses of LSE should be replaced with DP.

¹ See Requirement R1 of MOD-032-1, which requires each TP and PC to develop data requirements and reporting procedures for the collection of modeling data used for the development of models for each PC footprint.

² The NERC Rules of Procedure require a technical justification for new or substantially revised Reliability Standards. Please attach pertinent information to this form before submittal to NERC.

Requested information

- The table in Attachment 1 should include references to aggregate DER in the steady-state and dynamics columns. The drafting team should consider the data needed for modeling aggregate DER for the purposes of BPS reliability studies. However, the NERC SPIDERWG proposes that the SDT consider including, at a minimum, the following information in the table:
 - Steady-State:
 - Aggregate Distributed Energy Resources
 - Aggregate maximum and minimum active power capacity
 - Location (correlated to BPS bus location)
 - Breakdown by type of DER (e.g., by fuel type or technology)
 - Dynamics:
 - Aggregate Distributed Energy Resources
- Note that the SPIDERWG does not see a need to modify the short circuit column of Attachment 1 because #1 already states “all applicable elements” in the steady-state column should have necessary information related to positive, negative, and zero sequence data provided accordingly. If the TP/PC determines that aggregate DER is needed for these studies, then they have the capability to request such data. However, this is not a prevalent issue currently.
- In alignment with adding “DER” to the Attachment 1 table regarding necessary data for modeling purposes, it may be needed (based on the discretion of the SDT) to add a definition for “Distributed Energy Resource (DER)” to the NERC Glossary of Terms.

The SPIDERWG is in the process of developing recommended practices and NERC Reliability Guidelines related to data collection for DER modeling. These materials will provide detailed guidance for TPs and PCs to develop their data requirements and reporting procedures, per MOD-032-1. These materials are not intended to dilute the criticality of this SAR to address the issues identified above within MOD-032-1 itself. Rather, the SDT can use these materials as they become available when determining the specific language for inclusion in the standard requirements revisions.

Cost Impact Assessment, if known (Provide a paragraph describing the potential cost impacts associated with the proposed project):

Cost impacts are not fully known. However, due to the limited scope of the requested data, cost impact is expected to be minimal to all entities. DPs typically collect the maximum capacity and location of DER connected to their systems during the interconnection process. Therefore, data collection effort by the DP would be minimal additional effort. DPs already have processes to provide load data to the TP and PC, so DER data can be managed in a similar manner to reduce cost and effort. If the scope of the required data is expanded, cost impact would likely increase.

Please describe any unique characteristics of the BES facilities that may be impacted by this proposed standard development project (e.g. Dispersed Generation Resources):

DER owners are not subject to NERC Reliability Standards. However, SPIDERWG believes the DP (a NERC Registered Entity) has the information regarding DER connected to its distribution system that is needed

Requested information	
	for modeling the aggregate behavior of DER for the purposes of planning studies. The DP should provide that information to the TP and PC accordingly.
	To assist the NERC Standards Committee in appointing a drafting team with the appropriate members, please indicate to which Functional Entities the proposed standard(s) should apply (e.g. Transmission Operator, Reliability Coordinator, etc. See the most recent version of the NERC Functional Model for definitions):
	Transmission Planner, Planning Coordinator, Distribution Provider
	While not a Functional Entity per the NERC Functional Model, the “MOD-032 Designees” that are designated by the ERO to develop interconnection-wide base cases (i.e., the Regional Entities), will also be affected by these changes and should be considered for appointment to the Standard Drafting Team.
	Do you know of any consensus building activities ³ in connection with this SAR? If so, please provide any recommendations or findings resulting from the consensus building activity.
	The proposals in this SAR were developed by the NERC SPIDERWG, a stakeholder group under the NERC Planning Committee.
	Are there any related standards or SARs that should be assessed for impact as a result of this proposed project? If so which standard(s) or project number(s)?
	The ERSWG submitted a SAR related to MOD-032-1, as described above. This SAR supports those changes, and further expands on a few necessary additional changes related to DER modeling.
	Are there alternatives (e.g. guidelines, white paper, alerts, etc.) that have been considered or could meet the objectives? If so, please list the alternatives.
	The NERC SPIDERWG is preparing a Reliability Guideline on data collection for DER modeling. That guideline will provide recommendations for improvements to the data requirements and reporting procedures developed jointly by PCs and their TPs. However, updates to MOD-032-1 are also needed to ensure minimum planning consideration and reporting requirement on DER, particularly in Attachment 1. Therefore, this SAR aligns with the necessary changes to meet the objective.

Reliability Principles	
	Does this proposed standard development project support at least one of the following Reliability Principles (Reliability Interface Principles)? Please check all those that apply.
<input checked="" type="checkbox"/>	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input type="checkbox"/>	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

³ Consensus building activities are occasionally conducted by NERC and/or project review teams. They typically are conducted to obtain industry inputs prior to proposing any standard development project to revise, or develop a standard or definition.

Reliability Principles	
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained and implemented.
<input type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.
<input type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input type="checkbox"/>	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.
<input type="checkbox"/>	8. Bulk power systems shall be protected from malicious physical or cyber attacks.

Market Interface Principles	
Does the proposed standard development project comply with all of the following Market Interface Principles ?	Enter (yes/no)
1. A reliability standard shall not give any market participant an unfair competitive advantage.	Yes
2. A reliability standard shall neither mandate nor prohibit any specific market structure.	Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards.	Yes

Identified Existing or Potential Regional or Interconnection Variances	
Region(s)/ Interconnection	Explanation
None	None
